Causal Inference

Causal inference can help us to measure and quantify the impact of a change. Try filling in the below six boxes starting with the yellow tab and see if you have considered the contributing factors to your project or PDSA.

Alternative

Think of another option that you could approach to achieve the change?

Counterfactual

What do you anticipate to happen if you do nothing? Consider the trends of your current data.

Cofounders

List as many factors that might also impact your change, such as other schemes, entering a quiet period of the year, moving of services.

Can these be measured or quantified? it could be useful to collect this data for when you review or to even include within your results.

Can you measure this against the end result?

Can you measure this against the end result?

Theory

Write the reason for wanting to make the change.

Change

Put your change idea here

Hypothesis

What do you predict will happen as a result of your change?
